Introducing

onelinkVRX
by *PAL*TRONICS

The Next Generation in Jackpot Management Systems

- Ethernet communications from EGM to VRX Server means faster and more reliable floor network
- Server Hardware Platform independent can be virtualised or use physical servers
- Easily incorporated into existing IT infrastructure
- Operates with all existing EGMs on your floor
- Ability to operate multiple levels and multiple links on each EGM
- Stand-Alone Venue and Wide area (Multi-Venue) Capable
- Automated discovery of EGMs
- Ease of installation
- Multi Protocols – SAS, ASP and X series
- Remote support available via VPN back to Paltronics
- IT infrastructure requirements well documented
- Full Hardware and Software redundancy capable
- Enhanced diagnostics capabilities
- Internally and independently quality certified
- Certified for GLI-12, Macau, Singapore, Philippines

FEATURES	BENEFITS
Multi-Protocol	Connects to ASP, SAS and X-Series
OneLinkVRX operates with *OneLink* Slots	Ability to migrate bank at a time from existing *OneLink* Slots to *OneLinkVRX*, both systems can operate together.
Ease of use and configuration of gaming floor	EGM Auto-discovery using ethernet communications increases the speed and stability of communications.
Downloadable firmware to interface cards	For software upgrades and modifications, EPROMS do not have to be changed on each individual card and can be downloaded via the server
Pre-configure link changes days and weeks in advance	Minimal downtime as the changes can be pre-configured
Provides a secure, powerful and easy to use means for configuring and monitoring links on gaming floor	All link configurations are done from a central location. Pre-configured link changes including; Attachments/ detachments, parameter changes, automatic dispersal calculations and application in a matter of minutes
Real-time monitoring of your gaming floor	Know when your jackpot hits, player usage and if an EGM goes down
Ability to connect to an unlimited number of EGMs	Scalability of the *OneLinkVRX* allows you to connect additional EGMs and jackpots as required
High availability and reliability assured by very stable and redundant component system	The system has a built-in redundancy
High security	Limited access based on your permission level. You determine full access auditing
Ability to link multiple venue sites for management and reporting	Managing and monitoring of links in remote sites can be done from the main site, enabling configuration of links, viewing of jackpot hits, and all reporting
