FEATURES & BENEFITS

Ethernet communications from EGM to the JCS server means faster and more reliable floor network.

- **Ease of use and configuration of gaming floor**
EGM auto-discovery using ethernet communications increases the speed and stability of communications.
- **Downloadable firmware to interface cards**
For software upgrades and modifications, each individual card can be updated via the server.
- **Pre-configure link changes days and weeks in advance**
Minimal downtime as the changes can be pre-configured.
- **Real-time monitoring of your gaming floor**
Know when your jackpot hits, player usage and if EGM goes down.
- **High security**
Limited access based on your permission level. You determine full access auditing.
- **Provides a secure, powerful and easy to use means for configuring and monitoring links on the gaming floor**
All link configurations are done from a central location. Pre-configured link changes including; attachments, and detachments, parameter changes, automatic dispersal calculations and application in a matter of minutes.
- **Ability to connect to an unlimited number of EGMs**
Scalability of the Paltronics JCS allows you to connect additional EGMs and jackpots as required.
- **High availability and reliability assured by very stable and redundant component system**
The system has built-in redundancy.
